WHAT IS IT? Dano's reboot of a mid-60s Mosrite is a (semi) hollow victory

Semie's Semi

The legends of affordable retro venture once again into Mosrite territory for a new take on an obscure Semie Moseley classic...

Words Ed Mitchell **Photography** Olly Curtis

You might recall the occasion last year when Danelectro released its '64 model, a guitar that betrayed very little of the brand's own heritage. In fact, the '64 owed the lion's share of its features to the late Semie Moseley's Mosrite classics as brandished by instrumental cats The Ventures and punk icon Johnny Ramone.

Say you eyeballed the '64 and thought 'I'd be all over that if only they axed the Bigsby-esque vibrato and made it a hardtail.' Well, the new '66 model should make your day. With this latest release, Dano have spec'd a chunky six-saddle, wrap-around bridge/tailpiece with intonation adjustment. The other metal bits of note including the small UFO volume and tone knobs, and a set of vintage Kluson-style machineheads.

The '66 is actually based on a lesser known Mosrite beauty, first released in the year of The Beatles' *Revolver* album as the Combo model. The guitar was available in six-string, 12-string and bass formats. Like the original, the new

'66 has a bolt-on maple neck. You also get 23 medium frets – that's including the zero fret – tightly hugging the contour of the 356mm (14") radius rosewood fingerboard.

If the 'f' hole punched through the guitar's body hasn't given it away yet, the '66 features a semi-solid body, which we can confirm is crafted from alder. The shadow this guitar throws is predominantly Mosrite, with that instantly recognisable 'upside down' body and its 'German carved' bevelled edges. The illusion is shattered by the headstock shape, which isn't Mosrite correct but then the double coil lipstick tube pickup at the bridge is an even bigger giveaway that this is a Dano. Yeah, okay, the headstock logo is a pretty big clue too...

The neck pickup is a fat single coil that looks like a classic Mosrite job. Like the bridge unit, it's wired through a master volume, master tone and a three-way pickup selector toggle switch. The tone control has a pull-push coil-split function that works in conjunction with the bridge humbucker. It's here that we find one little niggler. The knobs are compact and

cool but the tone's coil-split switch is hard to operate unless you dig a nail under it.

Feel & Sounds

The '66 has a slim C profile neck and a low action. The zero fret might be a throwback but it does a great job of regulating the string height. This thing couldn't be better set up.

Plugging in, the combination of that semi-hollow alder body, the 635mm (25") scale and the perky lipstick bridge pickup makes for bags of jangle, a sound not a million miles from a Rickenbacker. We actually prefer the single coil option on a clean setting, and that preference continues when we add some dirt. Beat on the strings hard and you're in Ramones territory; dial in some Germanium-fuelled filthy fuzz and you're slap bang in garage band land for some Detroit-flavour rock. Bent notes snarl and harmonics pop off the strings with glorious unpredictability. Think Stooges, Count Five and the MC5.

The neck pickup has a fat voice that works great for jazz and blues, basically sounding like a P-90, so you can see how tonally versatile this

1. The '66's old school vibe is enhanced by a zero fret. This gives the guitar a perfect string height

2. As cute as they are the metal Mosrite-style control knobs are small and slippery. The push/pull coil split on the tone knob is tough to lift

3. The 'f' hole and upside down alder body are nods to classic Mosrite

4. While the bridge humbucker is Dano, the neck single coil has the DNA of a 60s Mosrite

5. The Lipstick-fuelled bridge humbucker can be split to a single coil by pulling up the tone knob

5

"The semi-hollow construction gives a bright and lively resonance while the robust hardtail makes the Dano fun to pound on"

guitar is. Sonically, we love the clarity and note separation on all positions on the '66.

Verdict

If you can find an original Mosrite Combo you won't pay much more than Dano are asking for their new Korean-made rendering. Like its '64 catalogued brother, the '66 impressed us on just about every level. It's well-made, tonally versatile and easy to play. We like the bright and lively resonance of that semi-hollow construction and the fact that the robust hardtail makes the guitar so damn fun to pound on with your right hand.

The only thing that bugs us is the price. The '64 was too expensive in our opinion and the '66 is guilty by association. A quid shy of a grand is a lot of money for this guitar. You don't get a case at that price either, and there is the ever-looming competition from the likes of Eastwood who offer Mosie-flavoured gear for less lolly. Our advice if you're smitten by the '66 is keep 'em peeled for a good deal. Dano's semi-Semie could certainly rock your world if the price is 'rite. **G**

DANELECTRO '66

Price: £999

Origin: Korea

Type: Twin-cutaway semi-hollow electric guitar

Body: Alder

Neck: Maple, bolt-on

Scale length: 635mm (25")

Nut/width: Aluminium/42mm

Fingerboard: Rosewood, 356mm (14") radius

Frets: 23 (inc zero fret), medium

Hardware: Chrome six-saddle wrap-around bridge/tailpiece, and vintage style tuners

String spacing, bridge: 50.8mm

Electrics: 1x twin 'Lipstick' humbucker (bridge), 1x single coil (neck), 3-way pickup toggle switch pickup selector, master volume, master tone (with pull-push coil-split switch)

Weight (kg/lb): 2.8/6.13

Options: None

Range options: None

Left handers: No

Finishes: 3-Tone Sunburst (as reviewed), Gloss Black, Transparent Orange, Transparent Red

8/10

PROS: Quality construction, great playability and a bunch of usable tones back up the pretty pawnshop prize looks

CONS: The price tag is a bit heavier than the guitar can bear but the fiddly knobs are the only other niggle
